

STOPAQ® WRAPPINGBAND WSH

Product Information

Product description: Stopaq Wrappingband WSH is a corrosion preventing wrap material that is especially designed for application on wet and submerged tubular objects, and it can also be applied on dry substrates. It adheres very well to bare steel and existing coatings.

Stopaq® Wrappingband WSH is based on a compound containing non-crystalline, low-viscosity, non-crosslinked, (fully amorphous) pure homopolymer PolylsoButene. It is viscous at the indicated operating temperatures and, due to its liquid nature, flows into all irregularities of the substrate. The compound does not cure and is unable to build up internal stress.

Stopaq® Wrappingband WSH is applied as an elementary part of Stopaq® Coating Systems that further require application of one of more mechanical protective layers like Stopaq® Outerwrap and Stopaq® Outerglass Shield, which become an integral part of the coating system. This improves impact and indentation resistance of the coating system and ensures adequate performance of the corrosion preventing properties.

Features

- Adheres to many types of coating like: PE, Neoprene and Epoxies
- Controlled cold flow providing permanent inflow into the finest pores of the substrate.
- Resistant to low temperatures without getting brittle
- Low surface tension; adheres on many types of dry and wet substrates at a molecular level
- Adhering well to the surface in an environment with fresh, sea or condensed water on the surface
- Constant film thickness
- Adhesion based on vanderWaals forces

Benefits:

- Safe to use
- Fast and easy to apply
- Easy to control application
- no blasting techniques required
- Conforms to irregular shapes
- Surface tolerant:, wire brushing or high pressure water jetting is sufficient

Application examples

Offshore and submerged tubular objects: For protection against external corrosion of risers and steel jetty-pile structures situated in the splash zone, both above and below the waterline.

Submerged pipelines: For protection against external corrosion of submerged carbon steel pipelines.

Underwater pipe coating repair: For pipe coating repair, coating rehabilitation, and protection against external corrosion of submerged pipeline coating defects.

Coating repair of condensing pipelines: For protection against external corrosion of steel pipelines with a surface temperature below dewpoint.

Product properties of	Stopaq® Wrappingband WSH	
Colour	Green	
Thickness	2,4 mm ± 10% [94 mils] A)	
Density	$1,45 \pm 0,1 \text{ g/cm}^3 [12.5 \pm 0.8 \text{ lbs/gal}] (ISO 1183-1)$	
Temperature ranges	Operational: -45 °C to +70 °C [-49 °F to +158 °F]	
	Short term: +90 °C [+194°F]	
Drip resistance	Tested 72h at +100 °C [+212 °F] A)	
	 No dripping of compound 	
Adhesion	Peel tests on carbon steel St 2 cleanliness (ISO 8501-	
	1) and plant coating PE, Neoprene whereby the	
	coating was applied under the following conditions:	
	 Dry (no detectable salt residues) 	
	 Dry with NaCl contamination approx. 1000 mg/m² 	
	 Immersed in fresh water 	
	 Immersed in 3% NaCl solution 	
	Peel test before ageing, after thermal ageing and	
	after hot water immersion both for 100 days at	
	Tmax + 20 °C = 90 °C $^{A)}$	
	Peel strength:	
	At +23 °C [+73 °F] \geq 0,040 N/mm [3.6 ozf/in]	
	At +70 °C [+158 °F] ≥ 0,020 N/mm [1.8 ozf/in]	
	In all cases:	
	Cohesive separation mode and Coverage ≥ 95%	
Lap shear resistance	Tested on steel St 2 cleanliness A)	
	Lap shear strength:	
	At +23 °C [+73 °F] \geq 0,004 N/mm ² [0.58 psi]	
	At +70 °C [+158 °F] \geq 0,002 N/mm ² [0.29 psi]	
	In all cases:	
	- III dii cases.	
	— If all cases.Cohesive separation mode and Coverage ≥ 95%

General order information		
Product	Stopaq® Wrappingband WSH is available in rolls with	
	the following dimensions	
Art. Nr.:	Product dimensions and contents:	
69101-00900	100 mm x 9 m [4" x 29'6"], 6 pcs/box	
Handling	Handle with care. Keep boxes upright.	
Storage	Store indoor, clean and dry, away from direct	
	sunlight in a cool place below +45 °C [113 °F].	

V 3 / 20220317 (EN) Page 1 / 2

Application instruction - Job preparation		Application instruction – Brief version	
General Underwater application, of Stopaq® Wrapp WSH and additional Stopaq® materials sho		See specific Stopaq® co Wrappingband WSH	ating instructions for application of Stopaq®
	be carried out by professional divers certified for application of Stopaq® products.	Wrapping	Start with removal of a small part of the transparent release liner and apply the Stopaq® Wrappingband
Tools, equipment and auxiliaries	 Surface preparation tools like water jetting equipment or power tooled wire brushes Scissors, knife, measuring tape Dry lint-free cloths Personal protective gear and diving gear if applicable 	Release liner	WSH onto the substrate. Wrap the Stopaq® Wrappingband WSH with some tension and ensure to minimize air- or water entrapment underneath. Avoid strong pulling force on the roll of material. Do not remove the transparent release liner completely before application of the Stopaq®
Additional coating materials	Coating applied in atmospheric conditions Stopag® Wrappingband WSH requires application of		Wrappingband WSH. Remove just prior to application onto the substrate.
	a polymeric outer wrap, such as: - Stopaq® Outerwrap HSPEX or HTPP - In high impact areas the use of Stopaq® Outerglass Shield is required. Coating applied in submerged conditions Stopaq® Wrappingband WSH requires application of	Overlap of wraps	Coating applied in atmospheric conditions - Side-by-side overlap: ≥ 10 mm [3/8"] - Consecutive rolls: ≥ 100 mm [4"] Coating applied in submerged conditions - Side-by-side overlap: ≥ 50% Consecutive rolls: ≥ 100 mm [4"]
	the following complementary materials: Stopag® Intermediate Wrap PVC Stopag® Outerglass Shield Stopag® Compression Foil	Visual inspection Mechanical	The appearance of Stopaq® Wrappingband WSH should look smooth and tight and should cover all details. Stopaq® Wrappingband WSH must be protected
Work area and substrate Product conditions	The ambient and surface temperature during application should be > +4 °C [40 °F]. There is no need for the surface to be dry. The temperature of Stopaq® Wrappingband WSH should preferably be between +4 °C and +40 °C [39	protection	against impacts, indentations, and other influences within the shortest period of time possible after finishing application. This is obtained by subsequent application of additional coating materials as per the specific application instruction.
	to 104 °F] for the ease of application.		

Application instruction - Surface preparation		
General	All substrates must be free from contamination. Biological growth, mill-scale, loose rust, loose remainders of old coating, oil, grease and other adhering matter need to be removed. Adhering existing coating does not have to be removed. Water jetting equipment may be used to obtain a sufficient surface cleanliness.	
Substrate cleanliness	The entire steel substrate should at least be cleaned to St 2 cleanliness grade (ISO 8501-1). Start and end sections of the area to be coated should be thoroughly cleaned to bare steel over at least 150 mm e.g. by using high pressure water jet cleaning or power tooled wire brushes. Roughness profile is not essential for adhesion.	

de-glossed.

Areas with existing coating should be cleaned and

Handling and commissioning			
Exposure to loads	Objects coated with Stopaq® Wrappingband WSH should not be exposed to loads e.g. from supportsor lifting equipment.		
Immersion or burying	Immersion or burying is possible immediately after completion of the coating application. Consult data sheets for specific instructions of additional materials used. In case the coating is installed on pipelines that will be buried, backfill and compact with clean sand and filling material without sharp stones or hard lumps of soil.		

Information	
Documentation	Extensive information is available on our web-site.
	Application instructions and other documentation
	can be obtained by contacting our head office, from
	our local distributor or by sending email to
	info@sealforlife.com
Certified staff	Application of the described coating system should
	be carried out by certified personnel.
